Bicotrage

Execute Arbitrage on the go

The Problem

CRYPTO WALLETS AND GAS PAYMENTS

In the web3 world, many users have difficulties using their wallets and paying for gas. The Crypto Arbitrage requires buying and selling cryptocurrencies on multiple exchanges, swaps, which costs gas and time.

Our Solution

✓ **Social login**

Any web2 or web3 user can easily log in to the platform without any hassle.
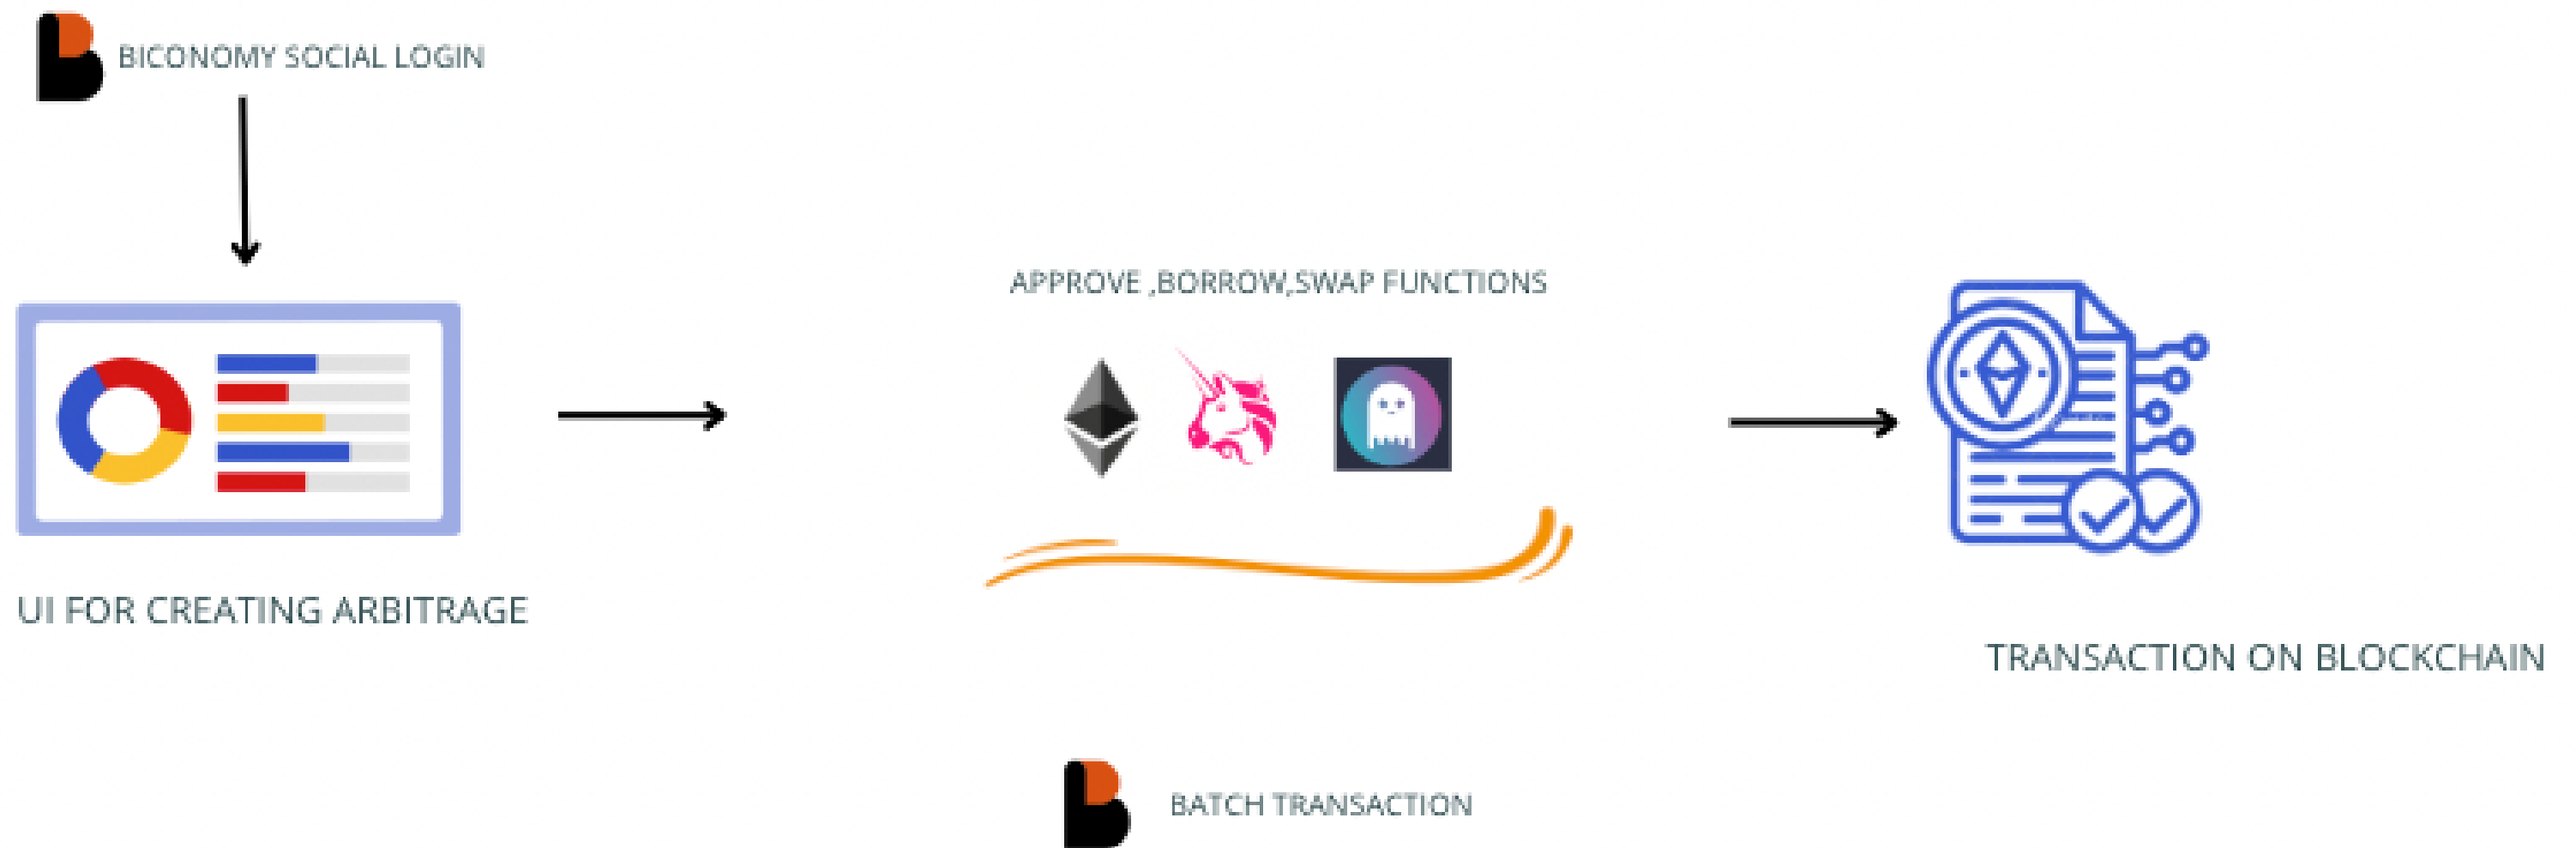

✓ **Batch Transactions**

Allows all trades across exchanges and swaps to be made together and can be processed as a single transaction.

✓ **Gasless Transactions**

Users will no longer have to pay for gas fees during the normal app flow. On behalf of user the partner can pay and can collect the same from the user.
